Education

B.Tech in Computer Science with specialization in AI & Robotics,
Vellore Institute of Technology – Chennai

July 2021 – April 2025

- CGPA: 8.12

Experience

Intern (Networking Engineer), SmartLeaven Technologies Pvt Ltd – Pune

Aug 2023 – Oct 2023

- Collaborated with industry-leading technologies like **Modbus TCP/IP and OPC UA** to streamline data exchange and real-time monitoring in industrial systems. Created and managed robust communication gateways for fast, bidirectional data transfers between Modbus TCP/IP devices, along with an OPC UA Server connection.

Projects

Malware Detection using CNN, Federated Learning PTQ

- Created a malware detection system that protects privacy by utilising CNNs on the MalImg dataset. used Post-Training Quantisation to optimise the model for edge deployment on IoT devices and implemented Federated Learning using PySyft to train across decentralised clients. High accuracy was attained with a smaller model size, making it perfect for real-time malware classification.

Emotional Analysis of Audio

- Used datasets like RAVDESS, TESS, CREMA-D, and SAVEE to develop a deep learning-based emotion recognition system for audio data. The evenly distributed emotions (400 samples each) across the seven categories of neutral, happy, sad, angry, fearful, disgusted, and surprised demonstrate how preprocessed and augmented data can produce a balanced dataset. achieved an overall accuracy of 85.5

India General Election Results 2024– SQL Power BI

- Created a thorough Power BI dashboard that shows the results of the 2024 Indian General Election at the party alliance, state, and constituency levels. NDA, I.N.D.I.A., and other alliances are being compared in real time using DAX measures, slicers, and drill-through filters. Incorporated several chart types, such as maps, bar charts, doughnut charts, and KPIs, to offer lucid insights into voter trends, party performance, and seat distribution. Interactive state- and constituency-level breakdowns that highlight important data like vote share, runner-up analysis, and demographics have improved usability

Spotify Data Analysis Dashboard– Power BI

- Spotify listening data was analysed using an interactive Power BI dashboard that tracked key performance indicators (KPIs) such as the number of albums (7.3K), artists (3.8K), and tracks played (12.7K). Heatmaps, trend charts, and scatter plots were used to visualise listening patterns (average listening time vs. track frequency). uncovered trends in user engagement by deriving insights on top-performing albums, artists, and tracks, peak listening hours, and platform usage.

Skills

Programming Languages: Python, SQL, Java, JS

Tools & Technologies: Numpy, Pandas, Seaborn, Matplotlib, Sklearn, Tensorflow, Excel, Power BI, Tableau

Concepts: OOPS, DBMS, OS, CN
